

Precision Intrusion Cutter

FEATURES/BENEFITS

- Cuts roots, pipes, concrete & more
- Uses high pressure water for cutting (2000-10000psi)
- Uses rotating cutting heads

Telespec's precision intrusion cutter allows effective, precise cutting and minimises the risk of damage. The accurate but powerful cutting head delivers a variable water pressure of between 2000 and 10000 psi. The pin sized cutting jets can tackle the toughest obstructions.

The Telespec **Precision Intrusion Cutter** is the latest addition to our product range and is sure to enjoy the same reception here in Australia as it has overseas.

Contractors and councils alike are often faced problems of obstructions in their pipes that cannot be removed through the use of conventional jetting or rodding equipment. Roots, intruding connections solidified grout and concrete are just a few examples.

The Telespec Precision Cutter allows for quick, effective and precise cutting of almost any obstruction without damaging the host pipe. It can deliver variable water pressure of between 2,000 and 10,000 psi, is complete with a 360° Rotating head and comes with a variety of interchangeable nozzles for different applications. The Telespec Precision Root Cutter can be controlled via either of the standard Telespec control centres and can be adapted to suit almost all jetting equipment.
